

The upper arm securely holds the timber against the long forks, even if the middle grip is not right

The large opening height of the upper arm and long forks allows for large volumes of timber to be grappled.

The grip claw is parked easily and safely when the gripper arm is completely closed in the function as a kickstand

The grip claw comes without suspension. Fransgard can deliver EURO or SMS brackets, which can be bolted on.

Technical data:	SK-950 / SK-1400
